

America's GOLF AND SPORTS GRASS™

- #1 For Divot Recovery
- #1 For Wear Tolerance
- #1 For Shade Tolerance
- #1 For Drought Resistance and Tolerance

Professional References

"I like the dark blue-green color. I am also impressed with the rapid lateral growth."

**Paul Crawford; Golf Superintendent,
Palm Beach Country Club, Palm Beach, FL**

"For me, the grass is fantastic. Celebration is on my tees, and has done well where other turfgrasses didn't work. Celebration is a lot tighter on the bunkers. It appears to have more shade tolerance than Tifway 419. I feel that it's done well for me so far; and, over time I'll have an even better feel for it as a replacement for other selections."

**Gary Snyder; Golf Superintendent,
Harbour Town Golf Links, Hilton Head, SC**

"One of the most impressive things about this turfgrass is its density: it's thicker, denser, and greener than 419, and has about four times the horizontal growth. Celebration's root mass is intense. It has excellent shade tolerance. The color is just beautiful."

**Ken Burnett; Golf Superintendent,
Boynton Beach, FL**

"The two things that impress me the most about Celebration are its drought tolerance and low fertility requirements. Side by side plots with 419 in the field strongly suggest that you can produce superior turf with Celebration using significantly less water and fertilizer inputs."
